RFC2433-09

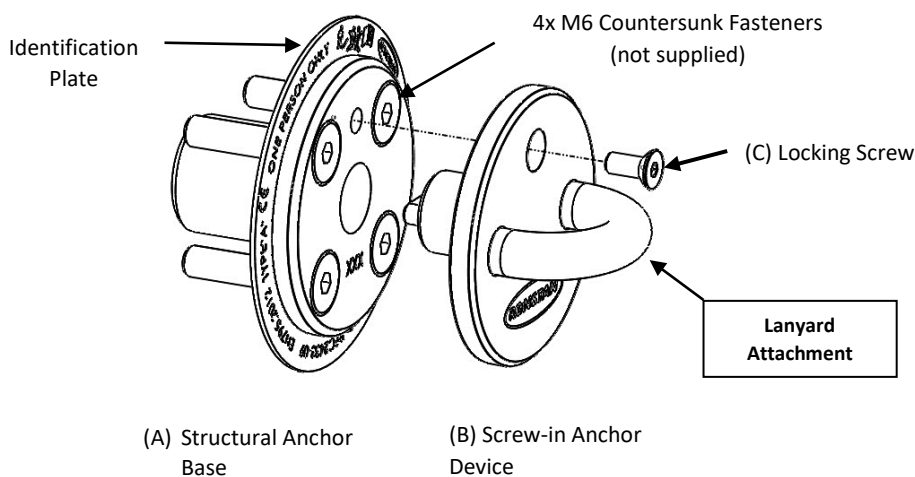

REMOVABLE SCREW-IN PADEYE ANCHOR DEVICE

CE Certified to European Standard EN795:2012, Type A: Personal fall protection equipment – Anchor Devices.
 Certified to Australian Standards AS1891.4:2009 and AS5532:2013

We are pleased to introduce this new certified padeye, which complements our popular safety rail systems and extends our range of fall protection solutions. The padeye has been tested and certified by Lloyd's Register, Copenhagen (Denmark) to the European Standard EN795:2012 as a Type A Anchor Device, and to the Australian Standards AS1891.4:2009 and AS5532:2013. It is appropriate for single person use only.

This Grade 316 Stainless Steel padeye provides a method of attachment for use in conjunction with personal protection equipment to protect against falls from a height, such as when working outside of conventional guardrails for cleaning and maintenance purposes. It shall not be used for lifting equipment or for any other purpose.

An identification plate featuring CE markings and an individual serial number forms an integral part of the structural anchor base, which is fixed to the mounting surface with four M6 fasteners. The screw-in anchor device is threaded into the structural base and features a locking screw to secure the assembly.

The complete User Manual for the RFC2433-09 Certified Padeye, with instructions for installation, periodic inspection and maintenance will be available for download from the Support tab of the Ronstan website in the coming days. The product will be available for delivery from Ronstan Denmark in early June.
